

Module Test

A

Module 13

Circle the correct answer for each problem.

1. What is the area of the parallelogram?

- a. 80 cm^2 b. 100 cm^2 c. 200 cm^2 d. 250 cm^2
c. 200 cm^2
2. A circle has an area of 2,826 square inches. Which is closest to the length of the diameter of the circle?
- a. 30 in. b. 60 in. c. 450 in. d. 900 in.
b. 60 in.
3. The length of a rectangular field is twice its width. What is the perimeter of the field if the width of the field is 30 meters?
- a. 45 m b. 90 m c. 150 m d. 180 m
d. 180 m
4. To the nearest inch, what is the circumference of a circle whose radius is 6.5 inches?
- a. 20 in. b. 41 in. c. 133 in. d. 531 in.
b. 41 in.
5. Which prism has a surface area of 170 square units?

- a. $SA = 170$ square units**

Fill in the blanks with one of the following words:

square cubic triangle trapezoid height slant height lateral surface

6. To find the area of a (trapezoid), use the formula $A = \frac{1}{2}(b_1 + b_2)h$.
7. It is *not* necessary to find the area of a circle when finding the (lateral) area of a cone.
8. The (height) of a pyramid is the length of the segment joining the vertex of the pyramid to the base of the pyramid at a right angle.
9. For a solid whose dimensions are given in millimeters, the volume of the solid is given in (cubic) millimeters.

10. Find the area of the shaded region.

196 in.²

Find the surface area.

- 11.

504 cm²

- 12.

About 169.56 in.²

Find the volume.

13.

About 3,052.08 yd³

14.

175 in.³

15. The area of a rectangle must be 48 square feet. What whole-number dimensions will give the least perimeter? Explain how you found your answer.

I made a table and listed the factor pairs of 48. These are the lengths and widths of different rectangles. Then, I found the perimeter of a rectangle with each set of dimensions. The dimensions which give the least perimeter are six feet by eight feet.

L (ft)	W (ft)	P (ft)
1	48	98
2	24	52
3	16	38
4	12	32
6	8	28

16. Show how to estimate the area of the shape at right. Each \square is 1 km².

Count the squares that are completely inside the boundary: 6. Then, count the squares through which the boundary passes: 34. Take half of that: $34 \div 2 = 17$. Add this amount to the number of squares completely inside the shape: $6 + 17 = 23$. The area is about 23 km².
