Module 5 Solving Linear Inequalities of One Variable
Lesson 4 Solving Multi-Step Linear Inequalities

Lesson Objective

- Solve and graph the solution sets to inequalities with variables on both sides.

To solve a multi-step inequality that has a variable on both sides, get the _____ on one side and the _____ on the other side.

The inequality $-4 \geq x$ can be rewritten as x _____.

1 Solve and graph: $-6x + 7 \geq 8x$ _____

2 Solve and graph: $12 - 5x \leq 3 - 2x$ _____

3 Solve and graph: $8 - 2(3 - x) > 16 - (x + 2)$ _____
