## NAME

## Module 5 Solving Linear Inequalities of One Variable <br> Lesson 7 Solving Problems Using Inequalities of One Variable

## DATE

## Set 1

1. Ms. Lee must spend less than $\$ 25.50$ on books for her class. She has a book in her basket that costs $\$ 9.80$. How much can Ms. Lee spend on other books?
2. The average graduating class size for schools in Westfield increased 5\% from 2002 to 2003. However, the 2003 average was still below the 2003 state average of 399 students. What was the maximum possible value for the average number of students in Westfield's graduating class in 2002?
$\qquad$
$\qquad$
3. Sheila will invest 4,000 in two accounts. One earns $4 \%$ interest and the other earns 5\% interest. Sheila wants to earn at least $\$ 190$ in interest in the first year. What is the minimum amount Sheila must invest at 5\%?
$\qquad$
$\qquad$
4. Hallie earns a commission at a clothing store. She must earn no less than $\$ 720$ in commission to buy a new car. If Hallie earns a $15 \%$ commission on her sales, what is the minimum amount she must sell?
5. Lester played two rounds of golf while he was on vacation and scored 72 in each round. What is the maximum score he can shoot in a third round of golf so that his average score is less than 70 ?
$\qquad$
