1. Sam and Stephanie both simplified $\frac{4x + 8}{4x + 4} \cdot \frac{x^2 - 1}{x^2 + 3x + 2}$. Their work is shown below. Who is correct and why?

Sam

$$\begin{aligned} &\frac{4x + 8}{4x + 4} \cdot \frac{x^2 - 1}{x^2 + 3x + 2} \\ &\frac{4(x + 2)}{4(x + 1)} \cdot \frac{(x - 1)(x + 1)}{(x + 2)(x + 1)} \\ &\frac{x + 2}{x + 1} \cdot \frac{x - 1}{x + 2} \\ &\frac{x - 1}{x + 1} \end{aligned}$$

Stephanie

$$\begin{aligned} &\frac{4x + 8}{4x + 4} \cdot \frac{x^2 - 1}{x^2 + 3x + 2} \\ &\frac{2}{1} \cdot \frac{-1}{3x + 2} \\ &\frac{-2}{3x + 2} \\ &\frac{-1}{3x} \end{aligned}$$

2. Write two rational expressions whose quotient is $\frac{2}{3y}$.
3. Explain how to multiply $\frac{3x + 2}{4x + 1} \cdot \frac{4x^2 + 13x + 3}{3x^2 - 13x - 10}$.
4. In order to divide $\frac{2x - 2}{x^2 - 1} \div \frac{4x + 4}{x^2 + 2x + 1}$, the first step is to invert the second rational expression. Would the next most logical second step be to multiply or to simplify? Explain.
5. Using three different methods, write the quotient of $\frac{4x - 3}{2x}$ and $\frac{2x + 1}{3x^2}$ as an unsimplified algebraic expression.
