

NAME _____

Module 19 Analyzing Data and Statistics
Lesson 3 Analyzing and Describing Graphs

**guided
practice**

Set 1

IQ Scores

9		0 0 5	
10		0 5 5	
11		0 5	12 0 = 120
12		0	
13			
14		5	

1. Find the five-number summary of the IQ scores given in the stem-and-leaf plot.

Minimum: 90, Q_1 : 95, Median: 105, Q_3 : 115, Maximum: 145

2. Make a box-and-whisker plot of the IQ-score data.

3. Find the five-number summary of the IQ scores when the outlier 145 is removed.

Minimum: 90, Q_1 : 92.5, Median: 105, Q_3 : 112.5, Maximum: 120

4. Make a box-and-whisker plot of the IQ-score data without the outlier. Make this plot above the plot that includes the outlier.

5. Compare the box-and-whisker plot that includes the outlier with the box-and-whisker plot that does not include the outlier.

Possible answers: Box shifted left slightly when outlier removed; right

whisker was shorter when outlier removed; there were the same minimum

and Q_2 values; interquartile ranges were almost the same, etc.
