

NAME _____

Module 10 Coordinate Geometry and Spatial Visualization
Lesson 2 Classifying Geometric Figures Using Points

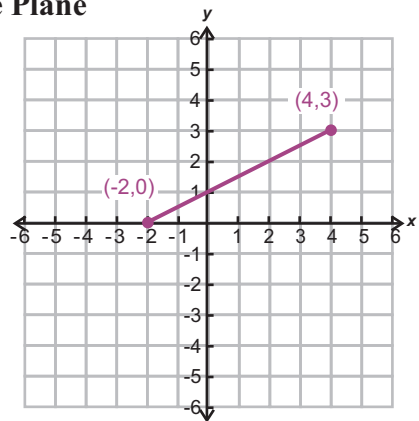

Lesson Objective

- Plot points that form the vertices of a geometric figure and draw, identify, and classify the figure.

Subtopic 1

One-Dimensional Figures on the Coordinate Plane

- 1** Graph the line segment with endpoints at $(-2, 0)$ and $(4, 3)$.

- 2** Graph the line that passes through the points $(5, 0)$ and $(-2, -3)$.

- 3** Graph the ray that has its endpoint at $(2, 5)$ and passes through $(-1, 2)$.

Subtopic 2 Two-Dimensional Figures on the Coordinate Plane

- 4 Graph the polygon with vertices $(-3, 2)$, $(-1, 5)$, $(3, 0)$, $(0, -4)$, and $(-2, -2)$. Then, classify the polygon.

Pentagon

- 5 Graph and classify the polygon with vertices $(-4, -2)$, $(-3, 2)$, $(1, 2)$, and $(6, -2)$. Give all the names that apply to the polygon.

**Quadrilateral
Trapezoid**

- 6 Graph the triangle with vertices at $(-2, 4)$, $(-2, -3)$, and $(4, -3)$. Then, classify the triangle by the lengths of its sides and by its angle measures.

Right Scalene Triangle
