

NAME \_\_\_\_\_

Module 11 Transformation of Shapes  
Lesson 2 Rotations

### Lesson Objectives

- Perform rotations of two-dimensional figures using a variety of methods.
- Draw and describe the results of rotations about the origin ( $90^\circ$  and  $180^\circ$ ).

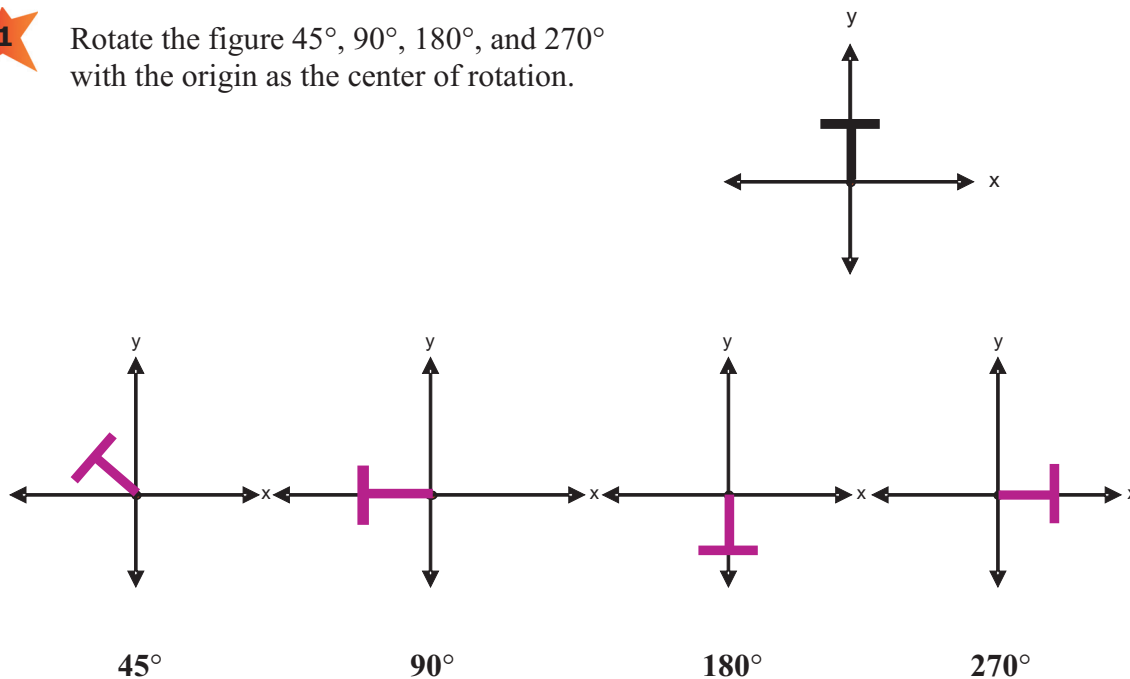

### Subtopic 1 Rotations of Two-Dimensional Figures

Rotation

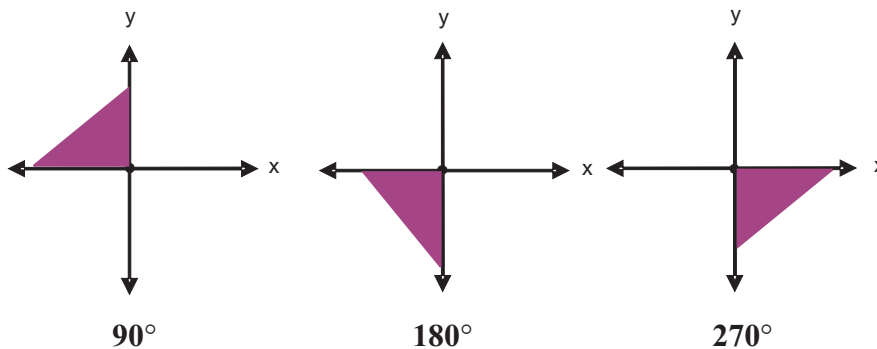

- A transformation in which a figure is turned through a **given angle** about a **fixed point**
- The fixed point is called the **center of rotation**.
- The given angle is called the **angle of rotation**.

Unless told otherwise, rotate in a **counterclockwise** direction.

- 1** Rotate the figure  $45^\circ$ ,  $90^\circ$ ,  $180^\circ$ , and  $270^\circ$  with the origin as the center of rotation.

- 2** Rotate the figure  $90^\circ$ ,  $180^\circ$ , and  $270^\circ$  with the origin as the center of rotation.

### Subtopic 2 Rotations Using Ordered Pairs

To rotate a point  $90^\circ$  counterclockwise about the origin:

- Take the opposite of the **y-coordinate**.
- **Exchange** the  $x$ - and  $y$ -coordinates.
- $(a, b) \rightarrow (-b, a)$

To rotate a point  $180^\circ$  about the origin:

- Take the opposite of **each coordinate**.
- $(a, b) \rightarrow (-b, -a)$

To rotate a point  $270^\circ$  counterclockwise about the origin:

- Take the opposite of the **x-coordinate**.
- Exchange the  $x$ - and  $y$ -coordinates.
- $(a, b) \rightarrow (b, -a)$

NAME \_\_\_\_\_

**Module 11 Transformation of Shapes**  
**Lesson 2 Rotations**

Rotate the point (2, 4) around the origin  $90^\circ$ ,  $180^\circ$ , and  $270^\circ$ .

- $90^\circ: (2, 4) \rightarrow (-4, 2)$
- $180^\circ: (2, 4) \rightarrow (-2, -4)$
- $270^\circ: (2, 4) \rightarrow (4, -2)$

Rotate the parallelogram around the origin  $90^\circ$  and  $180^\circ$ .

- $90^\circ: (a, b) \rightarrow (-b, a)$
- $180^\circ: (a, b) \rightarrow (-a, -b)$
