

Lesson Notes

9.2

NAME _____

Module 9 Characteristics of Geometric Shapes
Lesson 2 Quadrilaterals

Lesson Objectives

- Classify quadrilaterals.
- Use paper and physical models to determine the sum of the measures of interior angles of quadrilaterals.
- Find the missing measure of a quadrilateral.
- Compare quadrilaterals.

Subtopic 1 Types of Quadrilaterals

Quadrilateral

- A **simple** polygon
- **Four** sides
- Each side intersects at points called **vertices**.

A quadrilateral has four **sides**. A quadrilateral has four **vertices**.

A quadrilateral is named using **consecutive** vertices.

A parallelogram is a quadrilateral with two pairs of **parallel** sides.

A rectangle is a parallelogram with four **right** angles.

A **rhombus** is a parallelogram with four congruent sides.

A square is a **parallelogram** with four right angles and four congruent sides.

A trapezoid is a quadrilateral with exactly **one** pair of parallel sides.

1

Classify the figure in as many ways as possible. Then, name the figure two different ways.

Quadrilateral, Parallelogram, Rectangle
MNTR, TNMR

2

Classify the figure on the right in as many ways as possible.

Quadrilateral

3

Give the most specific classification possible for each figure.

Parallelogram

Trapezoid

Rectangle

4

Tell whether each statement is true or false. Explain your answer.

- Every rectangle is a parallelogram.

True: Every rectangle has two pairs of parallel sides.

- A square is never a trapezoid.

True: Trapezoids have only one pair of parallel sides, while squares have exactly two pairs of parallel sides.

- All quadrilaterals are trapezoids.

False: Not every quadrilateral has one pair of sides parallel. Here is a quadrilateral with no parallel sides.

Subtopic 2 Angles of Quadrilaterals

Quadrilateral Sum Property

The sum of the angle measures of a quadrilateral is 360°.

Find the value of x .

5

$$\begin{aligned}40^\circ + 140^\circ + 40^\circ + x &= 360^\circ \\220^\circ + x &= 360^\circ \\x &= 140^\circ\end{aligned}$$

6

$$\begin{aligned}90^\circ + 90^\circ + 115^\circ + x &= 360^\circ \\295^\circ + x &= 360^\circ \\x &= 65^\circ\end{aligned}$$
